

GALAPAGOS

ELECTRIC RADIATOR

The Galapagos is a stylish, electric, fluid-filled radiator that distributes uniform heat from its entire surface using thermofluid technology. The Galapagos electric radiator has an AUTO mode which is an in-built smart control function that tracks the user's requirements and room occupancy and adapts heating to comfort or eco mode accordingly as well as featuring open/closed window detection that switches the heater to a minimum output when a window is opened. The Galapagos has a stylish, curved aluminium front panel ideal for modern homes and kitchens.

KEY FEATURES

- Output range: 750W - 2000W
- Thermofluid technology - heating element immersed in a heat transmitting fluid
- Temperature accuracy to $\pm 0.1^{\circ}\text{C}$
- Aluminium front panel with a stylish, curved design
- Double insulation and over-temperature safety device
- In-built smart control function which tracks the user's comfort requirements as well as room occupancy, adapting heating to comfort or eco modes accordingly
- Open / closed window detection switches heater to minimum when windows are open
- Secure control panel
- ASP (anti-dust) technology
- Colour shade: white (RAL 9016)
- IP 24 rated / CE marked
- 2 year warranty

1 Aluminium front panel

2 Aluminium plates

3 Heating tubes

4 Sheathed heating element

5 Room temperature sensor

6 Control unit

7 Control panel

USER & INSTALLER FRIENDLY

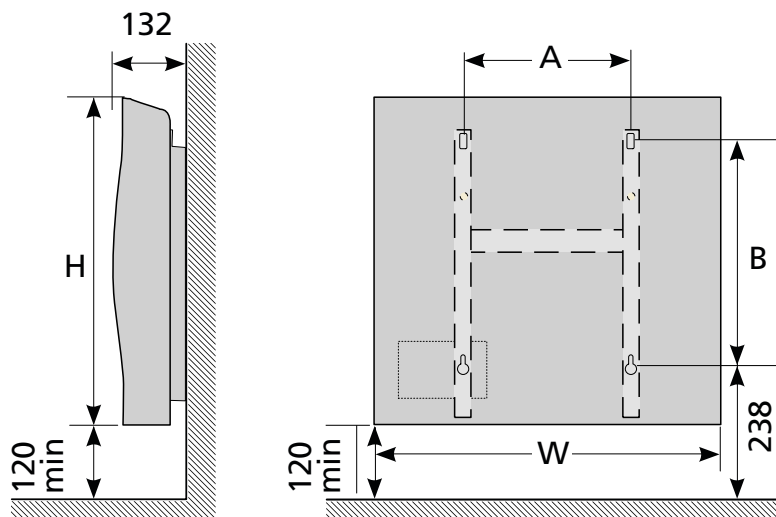

- Easy access digital electronic thermostat showing temperature in degrees
- Three pre-set heating programmes with energy use display
- Current mode display
- Heating indicator light
- Six order pilot wire: comfort, comfort -1°C, comfort -2°C, economy, frost-free and stop (load shedding) compatible with external programmer
